3. Add confetti slow-mo for S5

4. Add light flicker/glitch for all scenes

5. Add tunnel perspective depth for S7

PRO TIPS:

→ Use seeds consistently for shot matching

→ For character-specific shots, add body language descriptors

→ 9:16 versions: add UI overlay space (top third clear for metrics)

→ Color grade S5 with split-screen masking (concrete vs. LED)

→ S7 needs slowest camera movement for dread buildup

→ All --no faces tags maintain mystery until finale
